```python
#intersection of arrays
(1)
class Solution:
    def intersection(self, nums1: List[int], nums2: List[int]) -> List[int]:
        nums_set = set(nums1)
        result = set()
        for num in nums2:
            if num in nums_set:
                result.add(num)

return list(result)
```
